## (54) PRODUCTION OF L-ALPHA-AMINO ACID

compound. The reaction is preferably carried out at 20-70°C at pH8-12 for 4-6 days.

COPYRIGHT: (C)1989, JPO&amp;Japio

## (57) Abstract:

PURPOSE: To directly obtain the above compound useful as a raw material for foods, etc., from an  $\alpha$ -(N-alkylidenamino)nitrile compound of racemic modification and to reduce production cost thereof by using a specific bacterium having nitrile hydrolyzing ability.

CONSTITUTION: A nitrile compound (e.g., 2-aminopropanenitrile) shown by formula I or II ( $R_1$  and  $R_2$  are alkyl or phenyl) is treated with a bacterium [e.g., Nocardia sp. PC-29 (FERM-BP 1561)] belonging to the genus Nocardia, Mycobacterium or Corynebacterium, having hydrolyzing activity to give the aimed
